

# The Inflatable Cold Store

## Why choose the Inflatable Cold Store?

Compared to conventional container storage, ICS units are up to 40% cheaper per m<sup>2</sup>. ICS solutions can be transported on a single pallet and installed in just 90 minutes, minimising disruption to your business.

The Inflatable Cold Store is an efficient and flexible solution for almost any cold storage requirement. Units have been successfully installed on; mezzanine floors, docking bays, warehousing and production lines.

ICS units can run off 32 amp single phase or 16amp three phase power supplies. ICS units can allow for forklift access, once the unit is elevated from the ground.

## What has the ICS done for us?

After successfully negotiating a new contract, we were looking to expand our cold storage facilities at sites in Peterborough and Marden. Two locations where the existing facilities were not adequate for our increased operation. We supply fresh fruit and vegetables to clients who rely on our products to be as fresh as possible. We decided to use five ICS units supplied by Dawsonrentals portable cold rooms ltd because of the capacity and forklift access they offer. The installation was fast and efficient, which meant we could start using the inflatables straight away. Our inflatables have been great for us and we will definitely use the team at Dawsons again.'

# The High Capacity Store

## Capacity

Each single unit has a massive 20 pallets worth of storage space.

## Scalable

Allow your facility to grow in line with your businesses expansion. Up to 3 units can be linked together creating 60 pallets worth of storage.

## Temperature Range

Control temperature between -25°C/+25°C.

## Forklift Access

The units 3.68m height allows full forklift truck access.

## External Dimensions (m)

7.04 (w) x 3.68 (h) x 4.58 (d).

## Internal Dimensions (m)

5.84 (w) x 3.08 (h) x 4.58 (d).

## Why choose the High Capacity Store?

The High Capacity Store, when deflated, can fit on just two pallets and eliminates many access issues and restrictions that often block other facilities. HCS units use low amounts of energy and are incredibly efficient.

The structures height of 3.68m allows for forklift accessibility, which is a major plus. You are able to directly reach your temperature critical products.

We can link up to three units together, creating a storage solution with a massive 60 pallet capacity, all of which remains fully accessible via forklift.

## What has the HCS done for us?

“Following further diversification, we needed to store vast amounts of frozen products over 3 years. Our existing facilities weren’t sufficient so we looked for a solution. Dawsons proposed two HCS inflatables that would be linked together. They showed us how easy it was to increase your capacity and from this point we were fully on board. We really liked how the entire facility was accessible via forklift truck, which we knew would reduce handling costs. We have been able to store large amounts of frozen product within the structure and it has allowed us to centralise our distribution. Overall, we are very happy with the product and would definitely use it again in the future.”
